Wei Li's pride: the WL-AP03

Specialist stretch blow moulding machinery manufacturer Wei Li says that its WL-AP03 machine has the flexibility to produce PMMA and PC bottles for water jugs, wine bottles, glass and lampshades from preforms.

In most instances, these items are produced in injection blow moulding machines, which require considerable investment in equipment and accessories. Wei Li says that its WL-AP03 can be viewed as a cost-effective and energy-efficient option for processors. Processors can even make use of their existing injection machines in their factory to produce the required PMMA or PC preforms.

This machine can blow PET bottles and jars up to a volume 16 litres and neck diameter up to 200 mm.

Hong Kong-based Wei Li says that it has exported its range of stretch blow moulders to more than 33 countries in Asia, Africa, Europe, North America and South America. The company also provides advise on preform and bottle design as well as technical support. (222)
