Innovative clear PLA bottle from Wei Li

Wei Li Plastics Machinery's two-stage reheat stretch blow moulding machines have made possible the production of clear water bottles that can be blown from PLA. The bottles, with perfect neck finish and better strength and excellent transparency, is bio-

degradable. Wei Li also offers turnkey project upon request, from PLA preform design, bottle design, capping, filling to shrink wrap packaging. PLA is mainly used for thermoforming and injection products, such as, cups, trays, food containers, straw,

trash bags, etc. But Wei Li has successfully blown bottles with its reheat stretch blow mould technology using PLA resin. PLA as material for bottles production is gaining popularity with market researches pointing to the fact that consumers believe that beverages and products packaged in containers made from nature material are fresher and healthier.
