Mar 26, 2007

Compact and cost-effective production for
twin-cavity PET bottles

**WEI LI presented WL-MP02
Fully/Semi Automatic PET
Reheat Stretch Blow Moulding
Machine in Johannesburg 2007**

At the PRO-PLAS 2007 SHOW held in Johannesburg from Mar 13 to Mar 16, 2007, Wei Li Plastics exhibited a newly developed 2-cavity PET reheat stretch blow moulding machine. The machine on show is a WL-MP02 STANDARD Model equipped with a 2-cavity blow mould to produce 375ml PET bottles for mineral water.

"I am impressed by the bottle quality made in such a simple and compact machine!". This is a conversation repeated heard among visitors in the stand. It is not surprising that Wei Li has received very promising feedback and secured orders with nearly 20% of the potential buyers in the show.

The WL-MP02 STANDARD Model is designed for 2-cavity bottle production with body diameter up to 80mm. There are optional features such as automatic preform feeder and bottle ejector available for fully automatic production.

The latest WL-MP02 includes dual moving platens which ensure excellent and smooth mould clamping action as well as the shortest cycle time.

There are high-efficient heating lamps in 7 heating zones available for conditioning preform heating temperature. The average power consumption can be down to only 6 – 9 KW for ordinary preform design.

The machine can stand with maximum blowing pressure up to 25 bars for different bottle requirements. The use of stainless steel air storage tanks for the low-pressure and high-pressure air

supply ensures high-quality air for the bottle production and machine components.

WEI LI's presentation in South Africa

With its agent in South Africa, the Plasquip Pty Ltd., WEI LI has been renowned for its high-quality PET reheat stretch blow moulding machine and cost-effective machine manufacturer. Based in Johannesburg, Plasquip Pty Ltd has sales offices and service teams in all economically important regions of South Africa including Durban and Cape Town.

WEI LI in profile

WEI LI has more than 10 years experience in the development of PET reheat stretch blow moulding technology, manufacturing stretch blow moulding machines of the "WEI LI" brand for PET, PP, PC, PMMA, PS, SAN bottles with volume ranges from 15ml to 20L. Apart from standard machines for PET bottles, the company's range includes specialized machines for PP, PC, PMMA, PS, SAN bottles. With production establishments in Foshan, China and a marketing office in Hong Kong, WEI LI is maintaining an effective market presence across the world.
